Preliminary Information – Subject to Revision – For Collaborative Process Purposes Only

REPORT SUMMARY

This study has been prepared in support of the relicensing process initiated by the California Department of Water Resources (DWR) for the Lake Oroville Hydroelectric Project (the Project), located in northern California. The Federal Energy Regulatory Commission (FERC) license for the Project expires in February 2007 (FERC Project # 2100). FERC requires that relicensing applicants evaluate how compatible their project and project operations are with other comprehensive management plans. This L-3 Comprehensive Plan Consistency Evaluation has been prepared to fulfill this requirement.

This study evaluates the compatibility and consistency of the Project operations with the plans and policies that have been developed by federal, state, and local planning and resource agencies and other entities that are responsible for managing lands and resources within the study area. The study area includes Lake Oroville, the lands and waters within and adjacent to (0.25 mile) the FERC project boundary, and adjacent lands, facilities and areas with a clear Project nexus. Table 5-1 provides a summary of the plans evaluated.

The Interim Report for this study described relevant land and resource comprehensive management plans. Some of these comprehensive plans were identified by FERC, some were relevant plans identified by Staff and others were plans identified by the Land Use, Land Management, and Aesthetics Work Group (LUWG). The agencies and jurisdictions responsible for implementing the plans were asked to review the descriptions of the plans for accuracy. Most of these agencies and entities responded and their suggested changes have been incorporated in this Draft Final Report.

After protection, mitigation, and enhancement measures (PM&Es) associated with relicensing and other potential changes to Project operations and facilities have been identified, the Final Report will discuss whether or not those changes are consistent, or inconsistent with the identified comprehensive plans and if not, why the changes are inconsistent.

1.0 INTRODUCTION

1.1 BACKGROUND INFORMATION

The Lake Oroville Hydroelectric Project (the Project) is the keystone of the California State Water Project (SWP). The Project provides water supply, flood control, power generation, recreation, fish and wildlife enhancement, and salinity control to the State of California and is managed by the California Department of Water Resources (DWR). The Federal Energy Regulatory Commission (FERC) license for the Project expires in February 2007 (FERC Project # 2100). Therefore, a relicensing process was initiated by DWR in June 2000.

As part of Project relicensing, DWR decided to use an Alternative Licensing Procedure (ALP) that involves a collaborative planning effort with local, state and federal agencies with mandatory conditioning authority, Native American tribes, and local and regional recreation interests. This collaborative process was initiated in December 2000. Work groups representing major resource categories (e.g., Environmental, Engineering and Operations) are assisting DWR decision-making regarding relicensing issues, the scope of resource studies, and ultimately protection, mitigation and enhancement (PME) measures. The Land Use, Land Management, and Aesthetics Work Group (LUWG) is assisting DWR develop the land use and aesthetics studies.

To help reduce potential resource and management conflicts, FERC requires that relicensing applicants evaluate how compatible their project and project operations are with other comprehensive management plans. Many land and resource management and planning entities develop comprehensive management plans to help them manage the lands and resources for which they are responsible. These comprehensive plans may, or may not be, consistent with other comprehensive management plans. When they are not consistent, management direction of one entity may effect lands or resources managed by another entities.

This L-3 Comprehensive Plan Consistency Evaluation (L-3) identifies relevant land and resource management plans and describes them. It then discusses how consistent or inconsistent changes to Project facilities, operations, and PM&Es associated with relicensing are with the identified comprehensive land and resource management plans.

Initially approved in July of 2002, a Draft Final Report was completed in April 2003. After PM&Es and other potential changes to Project facilities and operations are identified, the Draft Final Report will be updated to evaluate the consistency or inconsistency of those changes with the comprehensive plans reviewed in this Study and a Final Report will be issued.

1.1.1 Statutory/Regulatory Requirements

DWR owns and operates the Oroville Facilities, a multipurpose water supply, flood control, power generation, recreation, fish and wildlife enhancement, and salinity control project on the Feather River in Butte County. The facilities currently operate under a license issued by FERC, which expires on January 31, 2007. DWR intends to submit an application for a new FERC license at least 2 years prior to the expiration of the current license. The proposed relicensing process is based on cooperation and collaboration with federal and state resource agencies, Indian Tribes, local governments, non-governmental organizations (NGOs), and interested members of the public.

The primary purpose of the L-3 study is to meet the relicensing requirements of FERC relative to comprehensive plans. FERC regulations require: (a) the identification of all relevant comprehensive land use and resource management plans, and (b) a discussion of the consistency or lack of consistency with each plan as a result of potential changes to Project facilities and operations as a result of relicensing (Chapter 1, Subpart F, Section 6 [Report on land management and aesthetics] of 18 CFR). FERC also requires an applicant justify a lack of consistency and document communication with agencies that have land use and resource management authority in the area. The Consistency Evaluation involves reviewing relevant comprehensive land use and resource management plans to determine if changes to the Project as a result of relicensing efforts would be consistent or inconsistent with those plans. The existing consistency of jurisdictions' plans with the Project is the baseline condition that will be used by DWR decision-making regarding relicensing issues and potential PME measures. Additionally, FERC requires that licensees cooperate with local, state, and federal agencies regarding lands adjacent to the study area.

FERC issues updated lists of comprehensive plans for each state that are to be considered for the L-3 study. The list that was used for this Study was issued by FERC in March, 2002. In addition to the plans identified by FERC, other relevant comprehensive land use and resource management were examined as part of this report. Table 5-1 provides a list of all the plans covered in this report.

1.1.2 Study Area

The Study Area includes Lake Oroville, the lands and waters within and adjacent to (1/4 mile) the FERC project boundary, and adjacent lands, facilities and areas with a clear project nexus.

1.2 DESCRIPTION OF FACILITIES

The Oroville Facilities were developed as part of the State Water Project (SWP), a water storage and delivery system of reservoirs, aqueducts, power plants, and pumping plants. The main purpose of the SWP is to store and distribute water to supplement the

needs of urban and agricultural water users in northern California, the San Francisco Bay area, the San Joaquin Valley, and southern California. The Oroville Facilities are also operated for flood management, power generation, to improve water quality in the Delta, provide recreation, and enhance fish and wildlife.

FERC Project No. 2100 encompasses 41,100 acres and includes Oroville Dam and Reservoir, three power plants (Hyatt Pumping-Generating Plant, Thermalito Diversion Dam Power Plant, and Thermalito Pumping-Generating Plant), Thermalito Diversion Dam, the Feather River Fish Hatchery and Fish Barrier Dam, Thermalito Power Canal, OWA, Thermalito Forebay and Forebay Dam, Thermalito Afterbay and Afterbay Dam, and transmission lines, as well as a number of recreational facilities. An overview of these facilities is provided on Figure 1.2-1. The Oroville Dam, along with two small saddle dams, impounds Lake Oroville, a 3.5-million-acre-feet (maf) capacity storage reservoir with a surface area of 15,810 acres at its normal maximum operating level.

The hydroelectric facilities have a combined licensed generating capacity of approximately 762 megawatts (MW). The Hyatt Pumping-Generating Plant is the largest of the three power plants with a capacity of 645 MW. Water from the six-unit underground power plant (three conventional generating and three pumping-generating units) is discharged through two tunnels into the Feather River just downstream of Oroville Dam. The plant has a generating and pumping flow capacity of 16,950 cfs and 5,610 cfs, respectively. Other generation facilities include the 3-MW Thermalito Diversion Dam Power Plant and the 114-MW Thermalito Pumping-Generating Plant.

Thermalito Diversion Dam, 4 miles downstream of the Oroville Dam creates a tail water pool for the Hyatt Pumping-Generating Plant and is used to divert water to the Thermalito Power Canal. The Thermalito Diversion Dam Power Plant is a 3-MW power plant located on the left abutment of the Diversion Dam. The power plant releases a maximum of 615 cubic feet per second (cfs) of water into the river.

The Power Canal is a 10,000-foot-long channel designed to convey generating flows of 16,900 cfs to the Thermalito Forebay and pump-back flows to the Hyatt Pumping-Generating Plant. The Thermalito Forebay is an off-stream regulating reservoir for the 114-MW Thermalito Pumping-Generating Plant. The Thermalito Pumping-Generating Plant is designed to operate in tandem with the Hyatt Pumping-Generating Plant and has generating and pump-back flow capacities of 17,400 cfs and 9,120 cfs, respectively. When in generating mode, the Thermalito Pumping-Generating Plant discharges into the Thermalito Afterbay, which is contained by a 42,000-foot-long earth-fill dam. The Afterbay is used to release water into the Feather River downstream of the Oroville Facilities, helps regulate the power system, provides storage for pump-back operations, and provides recreational opportunities. Several local irrigation districts receive water from the Afterbay.

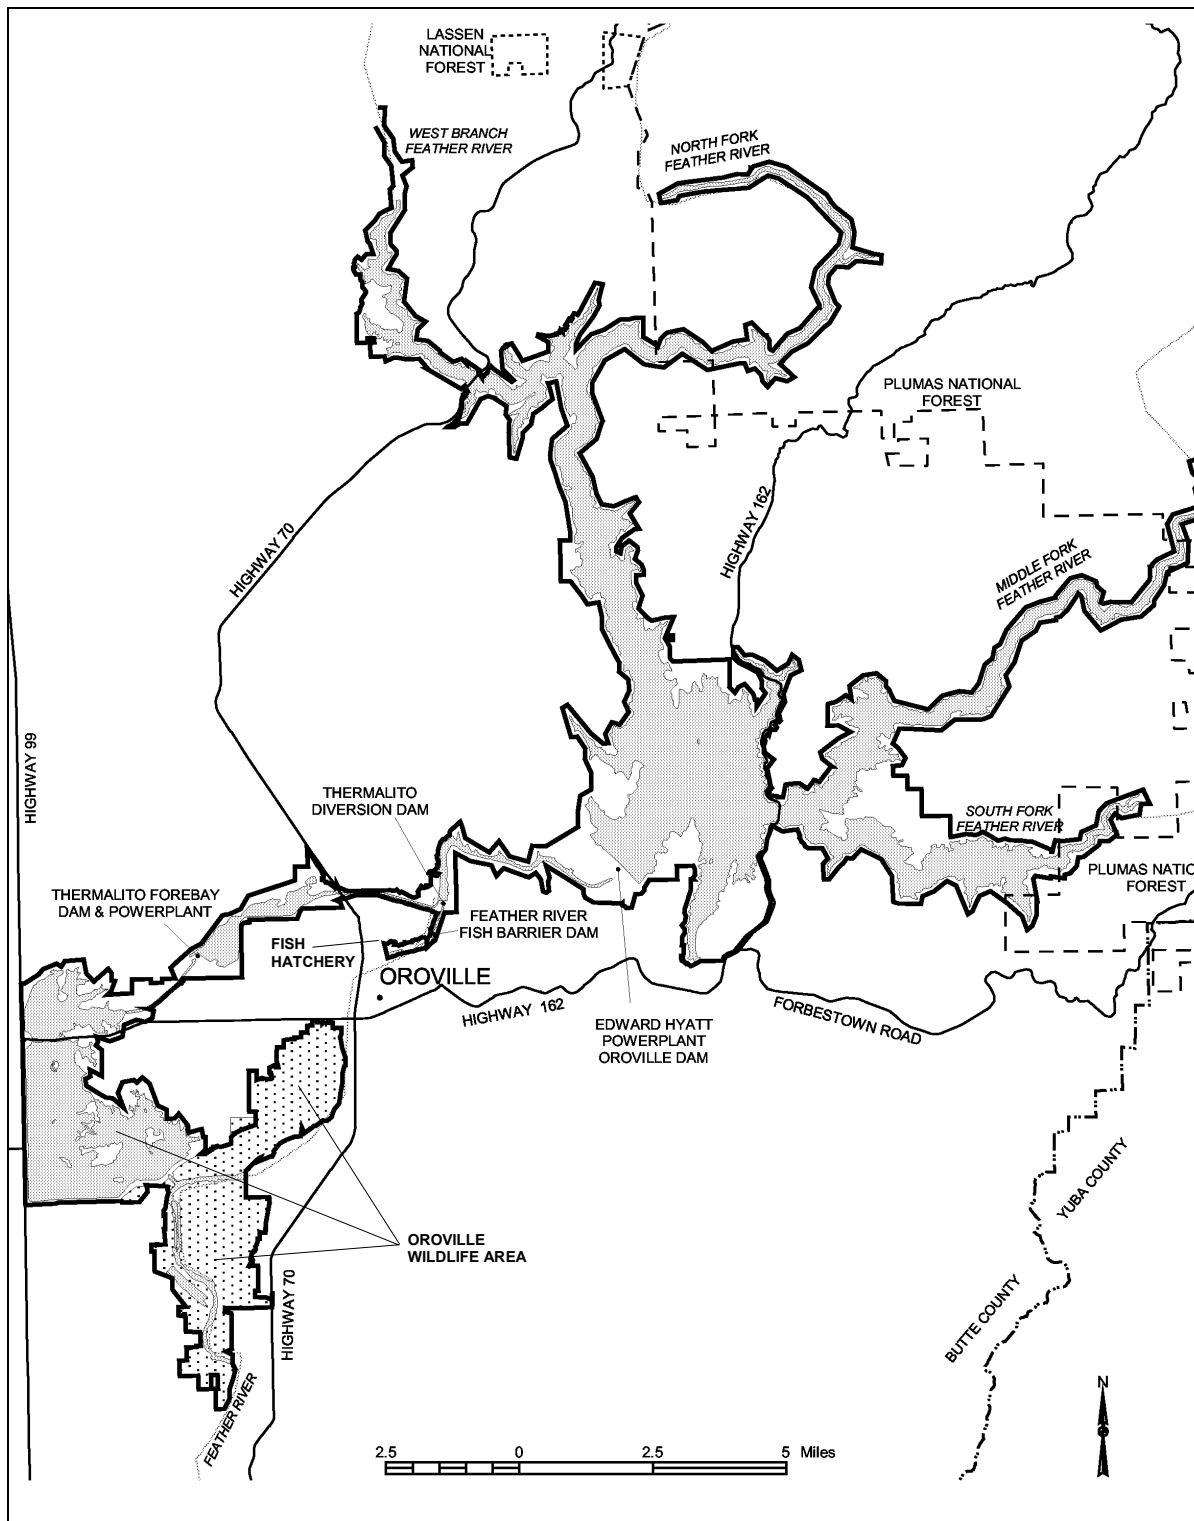

Figure 1.2-1 Oroville Facilities and the FERC Project Boundary

The Feather River Fish Barrier Dam is downstream of the Thermalito Diversion Dam and immediately upstream of the Feather River Fish Hatchery. The flow over the dam maintains fish habitat in the low-flow channel of the Feather River between the dam and the Afterbay outlet, and provides attraction flow for the hatchery. The hatchery was intended to compensate for spawning grounds lost to returning salmon and steelhead trout from the construction of Oroville Dam. The hatchery can accommodate an average of 8,000 adult fish annually.

The Oroville Facilities support a wide variety of recreational opportunities. They include: boating (several types), fishing (several types), fully developed and primitive camping (including boat-in and floating sites), picnicking, swimming, horseback riding, hiking, off-road bicycle riding, wildlife watching, hunting, and visitor information sites with cultural and informational displays about the developed facilities and the natural environment. There are major recreation facilities at Loafer Creek, Bidwell Canyon, the Spillway, North and South Thermalito Forebay, and Lime Saddle. Lake Oroville has two full-service marinas, five car-top boat launch ramps, ten floating campsites, and seven dispersed floating toilets. There are also recreation facilities at the Visitor Center and the OWA.

The OWA comprises approximately 11,000-acres west of Oroville that is managed for wildlife habitat and recreational activities. It includes the Thermalito Afterbay and surrounding lands (approximately 6,000 acres) along with 5,000 acres adjoining the Feather River. The 5,000 acre area straddles 12 miles of the Feather River, which includes willow and cottonwood lined ponds, islands, and channels. Recreation areas include dispersed recreation (hunting, fishing, and bird watching), plus recreation at developed sites, including Monument Hill day use area, model airplane grounds, three boat launches on the Afterbay and two on the river, and two primitive camping areas. California Department of Fish and Game's (DFG) habitat enhancement program includes a wood duck nest-box program and dry land farming for nesting cover and improved wildlife forage. Limited gravel extraction also occurs in a number of locations.

1.3 CURRENT OPERATIONAL CONSTRAINTS

Operation of the Oroville Facilities varies seasonally, weekly and hourly, depending on hydrology and the objectives DWR is trying to meet. Typically, releases to the Feather River are managed to conserve water while meeting a variety of water delivery requirements, including flow, temperature, fisheries, recreation, diversion and water quality. Lake Oroville stores winter and spring runoff for release to the Feather River as necessary for Project purposes. Meeting the water supply objectives of the SWP has always been the primary consideration for determining Oroville Facilities operation (within the regulatory constraints specified for flood control, in-stream fisheries, and downstream uses). Power production is scheduled within the boundaries specified by the water operations criteria noted above. Annual operations planning is conducted for multi-year carry over. The current methodology is to retain half of the Lake Oroville

storage above a specific level for subsequent years. Currently, that level has been established at 1,000,000 acre-feet (af); however, this does not limit draw down of the reservoir below that level. If hydrology is drier than expected or requirements greater than expected, additional water would be released from Lake Oroville. The operations plan is updated regularly to reflect changes in hydrology and downstream operations. Typically, Lake Oroville is filled to its maximum annual level of up to 900 feet above mean sea level (msl) in June and then can be lowered as necessary to meet downstream requirements, to its minimum level in December or January. During drier years, the lake may be drawn down more and may not fill to the desired levels the following spring. Project operations are directly constrained by downstream operational constraints and flood management criteria as described below.

1.3.1 Downstream Operation

An August 1983 agreement between DWR and DFG entitled, “Agreement Concerning the Operation of the Oroville Division of the State Water Project for Management of Fish & Wildlife,” sets criteria and objectives for flow and temperatures in the low flow channel and the reach of the Feather River between Thermalito Afterbay and Verona. This agreement: (1) establishes minimum flows between Thermalito Afterbay Outlet and Verona which vary by water year type; (2) requires flow changes under 2,500 cfs to be reduced by no more than 200 cfs during any 24-hour period, except for flood management, failures, etc.; (3) requires flow stability during the peak of the fall-run Chinook spawning season; and (4) sets an objective of suitable temperature conditions during the fall months for salmon and during the later spring/summer for shad and striped bass.

1.3.1.1 Instream Flow Requirements

The Oroville Facilities are operated to meet minimum flows in the Lower Feather River as established by the 1983 agreement (see above). The agreement specifies that Oroville Facilities release a minimum of 600 cfs into the Feather River from the Thermalito Diversion Dam for fisheries purposes. This is the total volume of flows from the diversion dam outlet, diversion dam power plant, and the Feather River Fish Hatchery pipeline.

Generally, the instream flow requirements below Thermalito Afterbay are 1,700 cfs from October through March, and 1,000 cfs from April through September. However, if runoff for the previous April through July period is less than 1,942,000 af (i.e., the 1911-1960 mean unimpaired runoff near Oroville), the minimum flow can be reduced to 1,200 cfs from October to February, and 1,000 cfs for March. A maximum flow of 2,500 cfs is maintained from October 15 through November 30 to prevent spawning in overbank areas that might become de-watered.

1.3.1.2 Temperature Requirements

The Diversion Pool provides the water supply for the Feather River Fish Hatchery. The hatchery objectives are 52°F for September, 51°F for October and November, 55°F for December through March, 51°F for April through May 15, 55°F for last half of May, 56°F for June 1-15, 60°F for June 16 through August 15, and 58°F for August 16-31. A temperature range of plus or minus 4°F is allowed for objectives, April through November.

There are several temperature objectives for the Feather River downstream of the Afterbay Outlet. During the fall months, after September 15, the temperatures must be suitable for fall-run Chinook. From May through August, they must be suitable for shad, striped bass, and other warmwater fish.

The National Marine Fisheries Service has also established an explicit criterion for steelhead trout and spring-run Chinook salmon. Memorialized in a biological opinion on the effects of the Central Valley Project and SWP on Central Valley spring-run Chinook and steelhead as a reasonable and prudent measure; DWR is required to control water temperature at Feather River mile 61.6 (Robinson's Riffle in the low-flow channel) from June 1 through September 30. This measure requires water temperatures less than or equal to 65°F on a daily average. The requirement is not intended to preclude pump-back operations at the Oroville Facilities needed to assist the State of California with supplying energy during periods when the California ISO anticipates a Stage 2 or higher alert.

The hatchery and river water temperature objectives sometimes conflict with temperatures desired by agricultural diverters. Under existing agreements, DWR provides water for the Feather River Service Area (FRSA) contractors. The contractors claim a need for warmer water during spring and summer for rice germination and growth (i.e., 65°F from approximately April through mid May, and 59°F during the remainder of the growing season). There is no obligation for DWR to meet the rice water temperature goals. However, to the extent practical, DWR does use its operational flexibility to accommodate the FRSA contractor's temperature goals.

1.3.1.3 Water Diversions

Monthly irrigation diversions of up to 190,000 (July 2002) af are made from the Thermalito Complex during the May through August irrigation season. Total annual entitlement of the Butte and Sutter County agricultural users is approximately 1 maf. After meeting these local demands, flows into the lower Feather River continue into the Sacramento River and into the Sacramento-San Joaquin Delta. In the northwestern portion of the Delta, water is pumped into the North Bay Aqueduct. In the south Delta, water is diverted into Clifton Court Forebay where the water is stored until it is pumped into the California Aqueduct.

1.3.1.4 Water Quality

Flows through the Delta are maintained to meet Bay-Delta water quality standards arising from DWR's water rights permits. These standards are designed to meet several water quality objectives such as salinity, Delta outflow, river flows, and export limits. The purpose of these objectives is to attain the highest water quality, which is reasonable, considering all demands being made on the Bay-Delta waters. In particular, they protect a wide range of fish and wildlife including Chinook salmon, Delta smelt, striped bass, and the habitat of estuarine-dependent species.

1.3.2 Flood Management

The Oroville Facilities are an integral component of the flood management system for the Sacramento Valley. During the wintertime, the Oroville Facilities are operated under flood control requirements specified by the U.S. Army Corps of Engineers (USACE). Under these requirements, Lake Oroville is operated to maintain up to 750,000 af of storage space to allow for the capture of significant inflows. Flood control releases are based on the release schedule in the flood control diagram or the emergency spillway release diagram prepared by the USACE, whichever requires the greater release. Decisions regarding such releases are made in consultation with the USACE.

The flood control requirements are designed for multiple use of reservoir space. During times when flood management space is not required to accomplish flood management objectives, the reservoir space can be used for storing water. From October through March, the maximum allowable storage limit (point at which specific flood release would have to be made) varies from about 2.8 to 3.2 maf to ensure adequate space in Lake Oroville to handle flood flows. The actual encroachment demarcation is based on a wetness index, computed from accumulated basin precipitation. This allows higher levels in the reservoir when the prevailing hydrology is dry while maintaining adequate flood protection. When the wetness index is high in the basin (i.e., wetness in the watershed above Lake Oroville), the flood management space required is at its greatest amount to provide the necessary flood protection. From April through June, the maximum allowable storage limit is increased as the flooding potential decreases, which allows capture of the higher spring flows for use later in the year. During September, the maximum allowable storage decreases again to prepare for the next flood season. During flood events, actual storage may encroach into the flood reservation zone to prevent or minimize downstream flooding along the Feather River.

2.0 NEED FOR STUDY

The primary purpose of the L-3 study is to meet the relicensing requirements of FERC relative to comprehensive plans. FERC regulations require: (a) the identification of all relevant comprehensive land use and resource management plans, and (b) a discussion of the consistency or lack of consistency with each plan as a result of potential changes to Project facilities and operations related to relicensing (Chapter 1, Subpart F, Section 6 [Report on land management and aesthetics] of 18 CFR). FERC also requires an applicant justify a lack of consistency and document communication with agencies that have land use and resource management authority in the area. This study involves reviewing relevant comprehensive land use and resource management plans to determine if changes to the Project as a result of relicensing efforts would be consistent or inconsistent with those plans. The existing consistency of jurisdictions' plans with the Project is the baseline condition that will be used by DWR decision-making regarding relicensing issues and potential PME measures. Additionally, FERC requires that licensees cooperate with local, state, and federal agencies regarding lands adjacent to the study area, therefore communications with relevant agencies and entities are included in this report.

3.0 STUDY OBJECTIVE(S)

3.1 APPLICATION OF STUDY INFORMATION

The application of this study will assist DWR in identifying relevant comprehensive land and resource management plans and to determine the consistency, or lack of consistency, of potential changes to Project facilities, operations, and PM&Es as a result of relicensing with those plans. Understanding this information will help determine how potential changes to Project facilities and operations can be implemented or altered over time to ensure success and satisfaction by all stakeholders.

3.1.1 Other Studies

Study L-3 has and will require coordination with Studies SP-L1 (Land Use), SP-L2 (Land Management), SP-L5 (Aesthetics), SP-R4 (Assess Relationship of Fish/Wildlife Management and Recreation), SP-R5 (Assess Recreation Areas Management), SP-T6 (Interagency Wildlife Management Coordination and Wildlife Plan Development), SP-F5 (Project Effect of FERC Project Fisheries Management Plans on a Balanced Fishery of Resident and Anadromous Fish), and SP-C3 (Cultural Resource Management).

4.0 METHODOLOGY

4.1 STUDY DESIGN

FERC publishes a list of comprehensive land and resource management plans that must be evaluated for consistency for states where there are FERC regulated projects. The list of comprehensive plans for the State of California that FERC published in March, 2002 were reviewed to find plans that were relevant to this project. In addition to the FERC identified comprehensive plans, other relevant comprehensive land and resource management plans that were known to staff or identified by the Land Use and Aesthetics Work Group were obtained and reviewed. Resource Area Managers (RAMS) from other work groups were also contacted to identify other relevant comprehensive land and resource management plans and asked to provide descriptions of the plans.

An Interim Report was prepared and distributed to the LUWG and RAMs along with agencies and jurisdictions that have planning and management responsibilities in the study area. The Interim Report provided a summary of the comprehensive plans and policies that are relevant to the Project. The LUWG received the Interim Report at the February 24, 2003 meeting and were given three months to provide comments back to staff. Based upon the LUWG's review, several plans were identified and added to the study. The agencies responsible for land and resource management plans in the Project study area were also contacted and given the opportunity to review and remark on the descriptions of the comprehensive plans they are responsible for implementing. The Draft Final Report has considered and incorporated the comments of the LUWG, DWR, and federal, state, and local planners where appropriate and where comments have been made.

4.2 HOW AND WHERE THE STUDIES WERE CONDUCTED

This study was conducted by reviewing comprehensive land and resource management plans and by interviewing key personnel from DWR, U.S. Forest Service (USFS), Bureau of Land Management (BLM), Department of Parks and Recreation (DPR), Department of Fish and Game (DFG), and county, regional, and local jurisdictions involved in management and planning in the study area.

When PM&Es and other potential changes to Project facilities and operations are identified, interviews with land and resource management agencies and jurisdictions will be conducted for the purpose of determining if the changes are consistent or inconsistent with the intent of the various land and resource management plans.

5.0 CONSISTENCY EVALUATION OF RELEVANT COMPREHENSIVE AND RESOURCE MANAGEMENT PLANS

The following is a summary of relevant comprehensive land use and resource management plans. Table 5-1 lists the plans that have been reviewed for the Consistency Evaluation. This section of the report is organized by jurisdiction, beginning with federal plans, continuing to state plans, and then local plans.

5.1 FEDERAL MANAGEMENT PLANS

The federal government does not have extensive land holdings in the Project study area. Federal lands that are in the Project area are managed by the USFS and BLM. USFS lands are part of the Plumas and Lassen National Forests and are managed under the Plumas National Forest Land and Resource Management Plan (Forest Plan). In addition, management of these lands is influenced by the more recent Sierra Nevada Forest Plan Amendment (Plan Amendment). BLM is responsible for scattered lands managed under the direction of the Redding Resource Management Plan (RMP). All three plans are discussed below. In addition to the comprehensive plans developed by the USFS and BLM that were reviewed, a plan for restoring anadromous fish (Final Restoration Plan for Anadromous Fish Restoration Plan) written by the U.S. Fish and Wildlife Service (USFWS) was reviewed. The Record of Decision for the Title 34-Central Valley Project Improvement Act (CVPIA) that was written by the Bureau of Reclamation (BOR) and the USFWS was reviewed, as was a plan developed by CALFED Bay-Delta Program Agencies (a joint Federal and State of California endeavor) that is called California's Water Future: A Framework for Action.

5.1.1 United States Forest Service, Plumas National Forest Land and Resource Management Plan, 1988

The Forest Plan was adopted in 1988 and directs the management of the 1,618,517 acres of the Plumas National Forest and 15,000 acres of the Lassen National Forest. The Plumas National Forest includes lands adjacent to the Project in the North Fork, Middle Fork, and South Fork extremities of Lake Oroville. Lands in the Big Bend area are contained within Lassen National Forest but are managed by Plumas National Forest and fall under the management direction of the Plumas Forest Plan.

The purpose of the Forest Plan is to help guide the USFS in the efficient use and protection of Forest resources, fulfill legislative requirements and balance local, regional and national needs. The Forest Plan establishes the management goals and policies that direct the management of the Forest over 10 to 15 years (the "planning period") and helps meet long term objectives over a 50 year period (the "planning horizon"). The Forest Plan also prescribes management practices for specified areas and time periods needed to obtain these objectives. In general, the policies for the lands in the areas

near the Project emphasize resource conservation, provision of high quality recreational opportunities, and protection of visual resources.

The Forest Plan has assigned Management Areas to all Forest lands, including lands near the Project. There are three Management Areas for Forest lands near the Project. Each Management Area has general guidelines for achieving resource objectives along with standards and guidelines for managing the various resources such as recreation, visual resources, wildlife, and lands. Lands within each Management Area have been assigned a Management Prescription.

Each Management Prescription has a different management emphasis. Along with specific standards and guidelines, the Management Prescriptions also contain general guidelines for achieving resource objectives within the Management Area.

The three management areas adjacent to the Project area include the Galen, French Creek, and Kellogg Management Areas. These management areas, and their standards and policies as they relate to Lake Oroville, are described below.

- Galen Management Area – The Galen Management Area extends easterly from Big Bend on the North Fork to the canyon of the Middle Fork of the Feather River. This 8,719-acre management area is bounded on the north by a segment of the North Fork Feather River and the Oroville-Quincy Road through the Brush Creek Work Center and on the south by the Forest boundary. Instability is a problem in the steep North Fork Canyon. Dispersed recreation is light because the area lacks recreational attractions and private land is widespread. Major activities include fishing, hunting, and some camping. No developed campgrounds are in the area. Table 5-2 lists the standards and guidelines for the Galen Management Area, as applicable to the project.
- French Creek Management Area – The French Creek Management Area is located between the North Fork of the Feather River, the Pulga-Four Trees Road, and the Oroville-Quincy Road. This 29,892-acre management area is primarily within the watershed of French Creek, which flows into the North Fork of the Feather River within Lake Oroville. Table 5-3 lists the standards and guidelines for the French Creek Management Area, as applicable to the project.
- Kellogg Management Area – The Kellogg Management Area is a 1 to 2 mile wide corridor along the north side of the Middle Fork of the Feather River Canyon from Oroville Reservoir to near Bear Creek. Slightly less than half of this Management Area is within Butte County. Table 5-4 lists some of the standards and guidelines for the Kellogg Management Area.

Table 5-2. Applicable Plumas National Forest Standards and Guidelines in the Galen Management Area.

General Direction	Standards and Guidelines
Recreation	
Efficiently manage recreation in the Lake Oroville State Recreation	Continue cooperation allowing DPR to manage the reservoir area including Plumas National Forest lands.
Provide for semi-primitive recreation	Maintain the character of the Big Bald Rock semi-primitive area. Restrict ORV use.
Facilities	
Provide roads necessary to meet developed recreation and other demands	Improve access to the Milsap Bar Campground on the North Fork Feather River.

Source: USFS (1988)

Table 5-3. Applicable Plumas National Forest Standards and Guidelines in the French Creek Management Area.

General Direction	Standards and Guidelines
Recreation	
Efficiently manage recreation in the Lake Oroville State Recreation Area	Continue cooperation allowing the DPR to manage the reservoir area including Plumas National Forest lands.
Provide developed recreation facilities/programs to meet demand while reducing unit costs	Maintain Rogers Cow Camp Campground, but operate as a self-service facility with no developed water supply. Close when major expenditure is required.
Visual Resources	
Maintain pleasing visual corridors	Minimize the visual impact of transmission lines and hydroelectric facilities.
Wildlife	
Maintain species viability	Provide suitable bald eagle foraging habitat along the North Fork upstream from Lake Oroville.
Water	
Protect and where necessary, improve water quality	Maintain and construct additional erosion control works when needed to control excessive erosion and sedimentation from the French Creek basin.
Facilities	
Upgrade forest arterials and collectors	Reconstruct the Quincy-Oroville Highway as part of the Forest Highway System. Reconstruct the Stanwood Saddle Road in cooperation with Butte County.

Source: USFS (1988)

Table 5-4. Applicable Plumas National Forest Standards and Guidelines in the Kellogg Management Area.

General Direction	Standards and Guidelines
Recreation	
Protect and enhance recreation use of the Middle Fork of the Feather River	Manage Wildlife Scenic Zones consistent with the Wild and Scenic Rivers Act.
Provide for semi-primitive recreation	Maintain the semi-primitive character of the Middle Fork and Bald Rock in areas without roads.
Expand and improve the trail system	Nominate Hartman Bar Trail as a National Recreation Trail when right-of-way is secured; improve facilities to meet planned uses.
Wildlife	
Protect and improve emphasis species habitat	Coordinate projects affecting wild trout streams with DFG. Provide suitable peregrine falcon habitat in the Bald Rock Dome area.
Facilities	
Upgrade forest arterials and collectors	Improve the Milsap campground access road as use studies show need to meet demand.
Special Areas	
Protect unique scenic values	Continue special management of Feather Falls Scenic Area; recommend designation of Feather Falls as a National Natural Landmark.
Protect unique scenic and botanic values	Preserve the champion ponderosa pine adjacent to the Hartman Bar Trail.

5.1.2 United States Forest Service, Sierra Nevada Forest Plan Amendment, 2000

In December 2002, the Sierra Nevada Forest Plan Amendment (Plan Amendment) was adopted by all land and resource management plans (LRMPs) for National Forests in the Sierra Nevada and Modoc Plateau, including the two National Forests located near the Project - the Plumas and Lassen National Forests. The Plan Amendment was adopted in response to the need for an old forest and associated species (such as the California spotted owl) conservation strategy that would protect, increase and perpetuate old forest conditions. The amendment specifically addressed several problem areas that are briefly described below:

- Protect, increase and perpetuate old forest ecosystems and provide for the viability of native plant and animal species associated with old forest ecosystems;
- Protect and restore aquatic, riparian, and meadow ecosystems and provide for the viability of native plant and animal species associated with these ecosystems;
- Manage fire and other fuels in a consistent manner across the national forests, coordinate management strategies with other land owners, integrate fire and

fuels management objectives with other natural resource objectives, address the role of wildland fire, and set priorities for fire and fuels management actions;

- Reduce and where possible, reverse the spread of noxious weeds; and
- Maintain and enhance hardwood ecosystems in the lower west side of the Sierra Nevada.

The Plan Amendment includes management strategies and standards and guidelines to address the problem areas listed above. Some Forest Plan standards and guidelines were superseded by provisions in the Plan Amendment.

5.1.3 Bureau of Land Management, Redding Resource Management Plan, 1993

The primary purpose of the Redding RMP is to update and integrate BLM land use planning for the Redding Resource Area into a single, comprehensive land use plan. The RMP directs the management of public lands and Federal mineral estates that are administered by the BLM within the Redding Resource Area of north central California. The four main land use issues addressed in the RMP are land tenure adjustment, recreation management, access, and forest management.

The Redding Resource Area encompasses approximately 247,500 acres of public land and 142,000 acres of federal mineral estate within Butte, Shasta, Siskiyou, Tehama, and Trinity counties. The total amount of land that the Redding RMP covers is approximately 247,000 acres in a 10 million acre area polygon. The Redding Resource Area consists of more than a thousand individual parcels of public land, scattered through five counties in northern California. To adequately address management issues in such a large geographic area, the Resource Area is divided into seven geographically distinct “management areas,” including: Scott Valley, Klamath, Trinity, Shasta, Sacramento River, Ishi, and Yolla Bolly. The Oroville Project is located in the Ishi Management Area.

The Ishi Management Area is divided further into seven sub-areas which include: Battle Creek, Deer Creek, Forks of Butte Creek, Minnehaha Mine, Upper Ridge Nature Preserve, Baker Cypress, and the Remainder of the Management Area. The Oroville Project lands fall under the Remainder of the Management Area sub-area. Within each sub-area are numbered Resource Condition Objectives which indicate how lands in the sub-areas are to be managed. The Resource Condition Objectives for the Remainder of the Management Area sub-area that apply to the Project are listed below (by number from the RMP).

- (1) Enhancing the resource management efficiency and public service mission of local, state, and Federal agencies via transfer of specific public lands from BLM.

- (2) Enhancing the ability to acquire high value resource lands within the Redding Resource Area by disposal of scattered public land interests within the Ishi Management Area.
- (5) Transfer via the Recreation and Public Purpose Act (R&PP) or exchange to a qualified state/local agency or non-profit organization administrative responsibility of six parcels of public land encompassing approximately 800 acres in the West Branch Feather River (between Magalia Reservoir and Lake Oroville).
- (7) Transfer via exchange or R&PP to the State of California all surface and submerged public lands, which encompasses approximately 6,900 acres within and adjacent to the Lake Oroville State Recreation Area (LOSRA) (approximately 3,900 acres within LOSRA and 3,000 acres immediately adjoining LOSRA are available for transfer to the State of California). All lands identified by California or BLM as excess to park needs will be offered for exchange to any party after 2 years from approval of the Final RMP.
- (8) 200 acres of public land near the Middle Fork Feather River are suitable for community development purposes as a reservation for federally recognized Indian tribe(s). If congressional support is unavailable, offer for exchange to any party after 5 years from the approval of the Final RMP.

5.1.4 Bureau of Reclamation/U.S. Fish and Wildlife Service, Record of Decision for Title 34 – Central Valley Project Improvement Act (Public Law 102-575) December 2000

On October 30, 1992, the Reclamation Projects Authorization and Adjustment Act of 1992 (Public Law 102-575) was signed into law, which included Title 34 of the CVPIA. The CVPIA amends the previous authorizations of the Central Valley Project (CVP) to include fish and wildlife protection, restoration, and mitigation as project purposes having equal priority with irrigation and domestic uses and fish and wildlife enhancement as a project purpose equal to power generation. The CVPIA identifies a number of specific measures to meet these new purposes and directs the Secretary of the Interior (Secretary) to operate the CVP consistent with these purposes, to meet the federal trust responsibilities to protect the fishery resources of federally recognized Indian tribes, and to achieve a reasonable balance among competing demands for use of CVP water. Specifically, the purposed of the CVPIA is to:

- Protect, restore, and enhance fish, wildlife, and associated habitats in the Central Valley and Trinity River basins of California;
- Address impacts of the CVP on fish, wildlife and associated habitats;
- Improve the operational flexibility of the CVP;

- Increase water-related benefits provided by the CVP to the State of California through expanded use of voluntary water transfers and improved water conservation;
- Contribute to the State of California's interim and long-term efforts to protect the San Francisco Bay/Sacramento-San Joaquin Delta Estuary; and
- Achieve a reasonable balance among competing demands for use of CVP water, including the requirements of fish and wildlife, agricultural, municipal and industrial and power contractors.

In December 2000, a Record of Decision (ROD) of the Department of the Interior (Interior), BOR and USFWS, documents the Decision for implementing provisions of the CVPIA. Reclamation and the USFWS implement the CVPIA through a range of actions and programs identified in the ROD that meet the purposes of this act.

5.1.5 U.S. Fish and Wildlife Service, Final Restoration Plan for the Anadromous Fish Restoration Plan, 2001

The Final Restoration Plan for the Anadromous Fish Restoration Plan (Restoration Plan) was established by the USFWS to increase the natural production of anadromous fish in the Central Valley of California under authority of the CVPIA. The Restoration Plan was adopted as Final on January 9, 2001. The CVPIA directs the USFWS to develop and implement a program that makes all reasonable efforts to double natural production of anadromous fish in Central Valley streams (Section 3406(b)(1)). The program is known as the Anadromous Fish Restoration Program (AFRP). The Restoration Plan is a programmatic-level description of the AFRP in broad and general terms, and will be used to guide the long-term development of the AFRP. The Restoration Plan presents the goal, objectives, and strategies of the AFRP; describes how the AFRP identified and prioritized reasonable actions and evaluations; lists those actions and evaluations; and notes those actions and evaluations that are already underway or that may be implemented in the near future. The AFRP coordinates restoration efforts with those used by other groups, such as DFG and the CALFED Bay-Delta Program.

The goal of the AFRP, as stated in Section 3406(b)(1) of the CVPIA, is to "develop within three years of enactment and implement a program which makes all reasonable efforts to ensure that, by the year 2002, natural production of anadromous fish in Central Valley rivers and streams will be sustainable, on a long-term basis, at levels not less than twice the average levels attained during the period of 1967-1991."

Six general objectives are defined to meet the program goals and are listed below.

- (1) Improve habitat for all life stages of anadromous fish through provision of flows of suitable quality, quantity, and timing, and improved physical habitat.

- (2) Improve survival rates by reducing or eliminating entrainment of juveniles at diversions.
- (3) Improve the opportunity for adult fish to reach their spawning habitats in a timely manner.
- (4) Collect fish population, health, and habitat data to facilitate evaluation of restoration actions.
- (5) Integrate habitat restoration efforts with harvest and hatchery management.
- (6) Involve partners in the implementation and evaluation of restoration actions.

Fishery managers must address complex biological, economic, social, and technological issues to substantially restore natural production of anadromous fish in the Central Valley. Restoration is anticipated to be costly and require changing the way aquatic resources and habitats are managed.

5.1.6 CALFED Bay-Delta Program Agencies, California's Water Future: A Framework for Action, 2000

In 1994, the State of California and the United States signed a "Framework Agreement" pledging cooperation on a long-term plan to address chronic water supply and environmental problems in the Sacramento-San Joaquin River Delta and San Francisco Bay (Bay-Delta). The Bay-Delta is the largest estuary on the west coast — home to 750 plant and animal species — and it supports 80 percent of the state's commercial salmon fisheries. It is also the hub of California's two largest water distribution systems - the CVP operated by the BOR and the SWP operated by DWR. Together, these water development projects divert about 20 to 70 percent of the natural flow in the system depending on the amount of runoff available in a given year. Its levees protect farms, homes, and infrastructure. The CALFED Bay-Delta Program is a collaborative effort among 23 state and federal agencies (CALFED Agencies) to improve water supplies in California and the health of the San Francisco Bay-Sacramento/San Joaquin River Delta watershed.

In August 2000, the CALFED agencies signed the CALFED ROD, which now provides the roadmap for the CALFED Program. Following issuance of the Record of Decision, CALFED Agencies are in the process of building a 30-year program that creates a foundation for long-term actions. Program components include:

- Governance
- Ecosystem Restoration
- Watersheds
- Water Supply Reliability
- Storage
- Environmental Water Account
- Water Use Efficiency (conservation and recycling)
- Water Quality
- Water Transfers
- Levees

- Conveyance
- Science

These program components are described in *California's Water Future: A Framework for Action*, established in 2000. This "Framework" document is incorporated within the ROD and states that all aspects of the CALFED Program are interrelated and interdependent. The Framework indicates that CALFED goals for these elements are dependant upon expanded and more strategically managed water storage.

5.2 STATE PLANS

The State of California owns and manages a significant amount of land in the Project area. Several agencies are responsible for the management of State land and have developed management plans for guidance. State agencies that have management responsibilities for State lands in the Project area include the DWR, the DPR and the DFG. In addition to these three State agencies, the CDF has developed management plans that influence land and resource management activities in the Project area. The following section summarizes state agency plans and information that pertains to the Project area.

5.2.1 Department of Parks and Recreation, California Outdoor Recreation Plan, 1993 (published 1994)

The California DPR is responsible for the preparation and periodic revision of the comprehensive California Outdoor Recreation Plan (Outdoor Recreation Plan). The Outdoor Recreation Plan was designed to meet the specific program responsibilities of the federal Land and Water Conservation Fund Act, whose concerns are outdoor recreation, land acquisition, facility development, redevelopment and rehabilitation. The 1993 edition of the Outdoor Recreation Plan provides a tool for statewide outdoor recreation leadership and action for the next 5 years. This plan provides policy guidance and basic information of value to all public agencies – state, federal, and local – engaged in providing outdoor recreational lands and facilities throughout the state. The Outdoor Recreation Plan describes existing conditions, explores and analyzes the resultant outdoor recreation issues that will be of major concern to public agencies in the next 5 years, and identifies a broad scope of recreation opportunities available in California. The seven most critical issues facing park and recreational agencies identified in the Outdoor Recreation Plan include:

- (1) Improving resource stewardship
- (2) Serving a changing population
- (3) Responding to limited funding
- (4) Building strong leadership

- (5) Managing aging facilities
- (6) Expanding legislative support and minimizing legal setbacks
- (7) Improving recreation opportunities through planning and research

Chapter 1 of the Outdoor Recreation Plan consists of general State policy statements. The Project-related policies regarding recreational opportunities include:

- **Leadership** – It is the State responsibility, through its DPR, to encourage and stimulate active and coordinated participation of appropriate federal, state, and local agencies, as well as the private sector, in providing areas, facilities, equipment, leadership, and services to meet the recreational needs of the state's population.
- **Opportunities** – It is State policy that parks, open space lands, lake resources, reservoirs, rivers and riparian resources, seashores, and beaches will be planned to optimize the opportunities for the myriad of recreation experiences without threatening or disturbing the natural or cultural resources of the area.
- **Equity** – It is State policy to provide access to a wide range of opportunities for all segments of California's diverse populations, and ensure that all citizens have fair and equitable access to attractive recreation opportunities that serve their needs and desires.
- **Local Responsibility** – It is State policy that government entities closest to the recreation resources and particularly to the sources of recreation demand have the primary responsibility for providing needed recreation opportunities.
- **Efficiencies** – The State recreation facilities shall be provided by the most efficient, effective, and economical means available.
- **Linkages** – It is State policy to “acquire and develop, for recreation, open space, and habitat protection purposes, trail and landscape linkages between public lands operated by different jurisdictions.
- **Access** – It is State policy to encourage the use of public transportation to access park and recreation facilities, and to work with transportation providers to develop and improve such means of access.
- **Cooperation** – It is State policy that the private sector shall be encouraged to develop and operate a wide range of recreational opportunities on both private and appropriate public lands.

- Land Acquisition – It is State policy that adequate supplies of land be acquired through a selective acquisition program to meet the future needs of the public.
- Information – It is State policy that varied educational, informational, and outreach programs should be undertaken and information distributed about recreation opportunities to all segments of the population so that access is not limited by lack of information.
- Recreation Ethic – It is State policy to encourage people to recreate carefully and wisely with a view towards the needs of future generations of recreationists who will also want quality opportunities.
- Natural and Cultural Resources – It is State policy that environmental, scenic, and cultural resources that recreation areas contain, and which constitute a public trust, shall be protected and interpreted for the benefit of future generations.
- Safety – It is State policy that Californians shall be provided recreation facilities that are safe and secure.

5.2.2 Department of Parks and Recreation, Public Opinions and Attitudes on Outdoor Recreation in California, 1997

The Public Opinions and Attitudes on Outdoor Recreation in California survey (the Survey) was conducted as part of the 1998 revision of the Outdoor Recreation Plan. The Survey was undertaken by the California DPR, with the participation and strong support of the BLM, National Park Service (NPS), and USFS. A random sample of 2,010 California households was used for the Survey. The Survey focused on two major areas of inquiry:

- (1) Public attitudes, opinions, and values with respect to outdoor recreation in California.
- (2) Demand for and current participation in 43 selected types of outdoor recreation activities.

Major findings of the Survey relevant to the Oroville Project include:

- Approximately 39 percent of respondents prefer natural and undeveloped areas for recreation.
- Approximately 30 percent of respondents prefer nature-oriented parks and recreation areas.

- Some of the more popular state-wide recreational activities (and percentage of state-wide participation by respondents) that were identified and that occur at the Oroville Project include; recreational walking (84 percent), driving for pleasure (68 percent), picnicking in developed sites (65 percent), trail hiking (58 percent), swimming in lakes, etc (57 percent), general nature wildlife study (54 percent), camping in developed sites (52 percent), freshwater fishing (37 percent), camping in primitive areas (26 percent), power boating (21 percent), kayaking/row boating/canoeing (18 percent), mountain biking (18 percent), horseback riding (14 percent), water skiing (13 percent), hunting (9 percent) and sail boating and windsurfing (7 percent).
- The survey indicates latent State-wide demand for the following ranked recreational activities occurring at the Oroville Project: recreational walking (#1), camping in developed sites (# 2), trail hiking (#3), swimming in lakes/rivers/ocean (#6), general nature wildlife study (#7), camping in primitive areas (#9), beach activities (#10), freshwater fishing (#12), picnicking in developed sites (#13), horseback riding (#15), kayaking/rowboating/canoeing (#21), mountain biking (#22), power boating (#30) and sail boating and windsurfing (#37).

In terms of public spending priorities, the Survey indicates that Californians support policies that focus more on existing facilities rather than expanding opportunities for outdoor recreation areas and facilities. In addition, Californians tend to want more local community parks; more horseback riding, hiking and/or mountain biking areas where no motorized vehicles are allowed; more campgrounds and fewer commercial businesses within public parks; and fewer areas for off-road vehicles.

5.2.3 Department of Parks and Recreation, Lake Oroville State Recreation Area General Plan Amendment Lime Saddle Area, 1988

The LOSRA general Plan Amendment – Lime Saddle Area (the Plan) was approved by the State Park Commission in 1988. The Plan was intended to specifically address the changes needed at the Lime Saddle Marina. The Plan focused on marina changes including: 1) acquisition of 5 acres of adjacent PG & E property, 2) the need to surplus 23 acres of property, and 3) increase the marina boat capacity from 350 to 500 boats.

5.2.4 Department of Parks and Recreation, Lake Oroville State Recreation Area Resource Management Plan and General Development Plan, 1973

This LOSRA General Plan (GP) was developed by the DPR in 1973, and is still in use today. An Amendment adopted in 1988 details additional development in the Lime Saddle Area. The GP describes allowable recreational uses and intensities for various areas around the lake, such as Bidwell Canyon, Lime Saddle, Goat Ranch, and others. Recreational use intensities described in the GP are primarily tied to slope and resource protection constraints. The GP also describes the existing and proposed recreational

development (as of 1973) within 15 areas of the park, including Kelley Ridge, Bidwell Canyon, Loafer Creek, Spillway Launching Ramp, Lime Saddle, Thermalito Forebay, and other areas. These developments include overnight facilities (camping sites, group camps, cabins, and lodges), day-use facilities (parking, picnic units, and swimming beaches), and boating facilities (launching lanes, car/trailer parking, and marina slips).

Management policies contained in the GP emphasize that lands and resources at LOSRA are to be managed to provide recreational opportunities and facilities in a natural or quasi-natural setting. The purpose of the GP is to "...perpetuate, enhance, and make available to the public the recreational opportunities afforded by Lake Oroville, Thermalito Forebay, and adjacent land and water areas and to protect all environmental amenities so that they make an optimum contribution to public enjoyment of the area."

5.2.5 Department of Water Resources, Proposed Amended Recreation Plan for Lake Oroville State Recreation Area, 1993

In compliance with the FERC Order of October 1, 1992, the DWR prepared the Amended Recreation Plan (ARP) in 1993 as the recreation plan for the LOSRA. The ARP was adopted by the FERC Order of September 22, 1994, and superseded the 1966 plan, Bulletin 117-6. (The initial Recreation Plan was submitted in 1991. Public dissatisfaction with the document caused FERC to require DWR to develop this amended plan for the LOSRA.) The 1993 ARP describes a number of improvements and the commitments of DWR to construct specific facilities and take actions to address the fisheries and recreation needs at LOSRA; additional improvements and actions deemed necessary by FERC were included in the September 22, 1994, Order. The 1993 ARP also detailed the time frame for the completion of additional proposed projects. The DWR acknowledges in the ARP that as the licensee, they are responsible for funding specific improvements. The ARP describes the fish and wildlife resources, facilities, local area, user patterns, and operation of LOSRA facilities, economic considerations, recreation plan, and the fisheries management plan.

The ARP acknowledges that recreation activities and preferences have changed over time (1966 to 1993), which has resulted in reduced demand for boat use and fishing, and increased demand for equestrian, bike, and hiking trails. Another finding was that use patterns in 1993 have changed due to low water levels and temporarily inaccessible or seasonally unusable facilities. The ARP puts forth recommendations for facility expansion and modification in light of these findings. Many of these recommendations have since been implemented.

In terms of Lake Oroville fisheries, ARP goals include developing a multi-species fishery in Lake Oroville that makes optimum use of the available habitat and forage base while sustaining the existing fisheries above current levels. This development could include management of the bass fishery to achieve the California Fish and Game Commission's designation of Lake Oroville as a "Trophy Black Bass Water."

The ARP states that Lake Oroville recreational facilities must be responsive to fluctuating water levels, topography that restricts uses during low water, temperatures that deter use during the peak summer period, a highway system that is conducive to local or destination-type uses, and reasonable user costs. The facilities recently developed at Lake Oroville have taken these factors into consideration, while incorporating cost effective development focusing on areas that would receive high usage. For example, facilities around the Thermalito Afterbay (such as Monument Hill) have been developed to mitigate against low pool elevations that restrict usage on Lake Oroville. Recreation facilities (Bidwell and Spillway) on Lake Oroville have been upgraded to take into account periods of low pool elevations, such as extending the length of boat launch ramps.

5.2.6 Department of Water Resources, The California Water Plan Update, Bulletin 160 Series

In 1957, the California DWR published Bulletin 3, the California Water Plan. Bulletin 3 was followed by the Bulletin 160 series, published six times between 1966 and 1993, updating the California Water Plan. A 1991 amendment to the California Water Code directed the DWR to update the plan every 5 years to address potential water shortages.

The Bulletin 160 series assesses California's water needs and evaluates water supplies, to quantify the gap between future water demands and water supplies. The series presents a statewide overview of current water management activities and provides water managers with a framework for making decisions. Bulletins 160-93 and 160-98 are the latest in the series and evaluate water management options that could improve California's water supply reliability.

5.2.6.1 DWR, The California Water Plan Update: Bulletin 160-93, 1994

Since the last water plan update in 1987, California Water: Looking to the Future, Bulletin 160-87, evolving environmental policies were introduced considerable uncertainty about much of the State's water supply. The winter-run chinook salmon and the Delta smelt were listed under the State and federal Endangered Species Acts, imposing restrictions on Delta exports, and the CVPIA (PL 102-575) was passed in 1992, reallocating over a million acre-feet of CVP supplies for fish and wildlife. Bulletin 160-93, The California Water Plan Update, attempts to address some of these issues.

Bulletin 160-93 discusses the effects of recent changes to the institutional framework for water management in California and presents: (1) California's existing water supplies and water quality considerations, (2) the plan's assessment of the need and demand for water, and (3) options for balancing those demands with supply. Finally, "Level I" recommendations are highlighted in two primary areas: demand management and supply augmentation. Level I options are those programs that have undergone

extensive investigation and environmental analyses and are judged to have a higher likelihood of being implemented by 2020. Level II options are those programs that could fill the remaining gap shown in the balance between supply and urban, agricultural, and environmental water demands. These options require more extensive investigation and analyses of alternatives. An investigation of Level II options were recommended, and their economic feasibility ascertained, to address the range of demand and supply uncertainty illustrated in the California Water Budget.

5.2.6.2 DWR, California Water Plan Update: Bulletin 160-98, 1998

Much of Bulletin 160-98 is devoted to identifying and analyzing options for improving water supply reliability within a planning horizon of 1995-2020. Water management options available to, and being considered by, local agencies form the building blocks of evaluations prepared for each of the State's 10 major hydrological regions. The bulletin provides a snapshot, at an appraisal level of detail, of how actions planned by California water managers could reduce the gap between supplies and demands. Rather than providing enforceable policies for water managers to follow, Bulletin 160-98 recommends improved strategies for water managers and local planners to consider.

5.2.7 Department of Water Resources, Lake Oroville Fisheries Habitat Improvement Plan, 1995

In response to the September 22, 1994, FERC Order, the DWR adopted the Lake Oroville Fisheries Habitat Improvement Plan in 1995 to improve fish habitat and establish a schedule for implementation. Due to the magnitude of Lake Oroville's water level fluctuations, steep slopes, and poor soils, and encroachment of terrestrial vegetation, the establishment of rooted aquatic vegetation is extremely limited. A major Plan objective includes increasing the productivity of fisheries within specific areas and the entire lake.

Although the Lake Oroville Fisheries Habitat Improvement Plan focuses on projects to be implemented before the 1998-99 season, it provides a template for long-term habitat enhancement plans for fisheries. These fisheries are a very important component of the overall recreation and tourism industry in the Oroville area. Therefore, the local community, as well as local and statewide fishing organizations, has expressed a strong desire for DWR to be involved in enhancing and maintaining strong fisheries at Lake Oroville. These desires have been presented to FERC on numerous occasions and have resulted in FERC's attention to fisheries at the lake.

5.2.8 Department of Fish and Game, Oroville Wildlife Area Management Plan, 1978

In 1962, the Director of Water Resources declared that public interest and necessity required the acquisition of the Oroville Borrow Area (the clay source for the construction

of the Lake Oroville Dam) for fish and wildlife enhancement and recreation. In total, 5,500 acres were transferred from DWR to DFG for creation of the OWA on August 12, 1968. In 1978, the DFG developed the Oroville Wildlife Area Management Plan (Management Plan). The purpose of the Management Plan was to provide for the preservation and enhancement of the OWA and for the reasonable use and enjoyment by the public.

The Management Plan describes the plan's purpose, description of the area, history of the site, present (as of 1978) situation and problems, and recommended action programs. The Management Plan states that one of the three primary objectives of the area is to provide for the recreational, scientific, and educational use of the area. The Management Plan also states that destructive uses and activities incompatible with wildlife and fisheries objectives (that were present at the time the Management Plan was written) will be eliminated through enforcement of existing regulations or development of additional regulations if necessary.

5.2.9 Department of Fish and Game, California Regulations on Hunting and Other Public Uses on State and Federal Areas, 2002

The California Regulations on Hunting and Other Public Uses on State and Federal Areas (the Regulations) is not a comprehensive plan per se, but it does govern hunting on state and federally owned lands in California and includes specific management direction for the OWA. Included in the Regulations are hunting license provisions and requirements; application and fee information; a listing of all hunting areas throughout the state, including wildlife areas, recreation areas, and national forests; and detailed information regarding area locations and boundaries, hunting practices and regulations, permit requirements, and firearms and archery equipment regulations in each hunting area.

The OWA, which is located in the Project area, is designated as a "Type C" hunting area. As a Type C hunting area, a permit or pass is not required for most uses. The OWA is open to hunting between September 1 and January 31 and during spring turkey season. However, special permits are required during the spring turkey season and are issued by drawing each year. The possession and use of rifles and pistols are prohibited in the wildlife area except in the designated target practice area, which is open all year.

Regulations within the OWA that influence the use of the area include the following:

- Boating is allowed only on Thermalito Afterbay. Boats may only be launched from designated launch areas. Boating may be restricted to certain zones designated by the department and boat speeds may not exceed 5 miles per hour.

- Camping is only permitted in designated campsites. Camping on the wildlife area is limited to not more than 7 consecutive days and not more than 14 days total in any calendar year, except by written permission of the Regional Manager.
- Dog training is allowed only in designated areas and only from July 1 through March 15.
- Fires are allowed only in portable gas stoves as sites designated for camping.
- Horses are restricted to roads open to vehicles and to areas within 25 feet of exterior boundary fences.

5.2.10 California Department of Forestry and Fire Protection and State Board of Forestry, California Fire Plan: A Framework for Minimizing Costs and Losses From Wildland Fire, 1996

In 1996, the SBF and CDF adopted the California Fire Plan (Fire Plan), a comprehensive strategy for wildland fire protection in California. The Fire Plan is the state's management guidance for identifying and working to reduce the risk and devastation caused by wildfire. The Fire Plan, updated most recently in 1999, targets pre-fire management measures geared at reducing fire fighting costs and property losses, increasing firefighter safety, and contributing to ecosystem health. The Fire Plan is a cooperative effort between the SBF and Fire Protection and the CDF. A general statewide framework is provided from which specific CDF units and other local entities (such as fire safe councils) use to draft county or area specific plans. The planning process defines a level of service measurement, considers assets at risk, incorporates the cooperative interdependent relationships of wildland fire protection providers, provides for public stakeholder involvement, and creates a fiscal framework for policy analysis.

The overall goal is to reduce total costs and losses from wildland fire in California by through focused pre-fire management prescriptions. The California Fire Plan has five strategic objectives:

- (1) Create wildfire protection zones that reduce the risks to citizens and firefighters.
- (2) Assess all wildlands, not just the state responsibility areas. Analyses will include all wildland fire service providers — federal, state, local government, and private. The analysis will identify high risk, high value areas, and develop information on and determine who is responsible, who is responding, and who is paying for wildland fire emergencies.
- (3) Identify and analyze key policy issues and develop recommendations for changes in public policy. Analysis will include alternatives to reduce total costs and losses by increasing fire protection system effectiveness.

- (4) Provide a strong fiscal policy focus and monitor the wildland fire protection system in fiscal terms. This will include all public and private expenditures and economic losses.
- (5) Translate the analyses into public policies.

Five major Fire Plan elements form the basis of an ongoing fire planning process to monitor and assess California's wildland fire environment, including: (1) wildfire protection zones; (2) initial attack success; (3) protection of assets; (4) pre-fire management; and (5) a fiscal framework. A primary focus of the plan includes identifying those areas of concentrated assets and high risk before fires start, where cost-effective pre-fire management investments can be made to reduce taxpayer costs and citizen losses from wildfire.

5.2.11 California Department of Forestry and Fire Protection Butte Unit, Fire Management Plan, 2002

The Butte Unit Fire Management Plan (Fire Management Plan) documents the assessment of fire management within the Butte Unit (Butte County and a portion of Plumas County) and identifies strategic areas for pre-fire planning and fuel treatment to reduce destruction and costs associated with wildfire. The Plan systematically assesses the existing level of wildland fire protection service, identifies high-risk and high-value areas where potential exists for costly and damaging wildfires, ranks these areas in terms of priority needs, and prescribes methods to reduce future costs and losses.

The Fire Management Plan has four components:

- (1) Level of service
- (2) Assets at risk
- (3) Hazardous fuels
- (4) Historic severe fire weather

To reduce the destruction and costs associated with wildfire, the Fire Management Plan aims to protect assets at risk through focused pre-fire management prescriptions, and in turn to improve initial attack success. The Fire Management Plan identifies five strategic objectives:

- (1) Wildfire Protection Zones – Create wildfire protection zones that reduce the risk to citizens and firefighters.
- (2) Initial Attack Success – Assess the initial attack fire suppression success of wildland fires on lands of similar vegetation type. This is measured in terms of

percentage of fires that are successfully controlled before unacceptable costs and losses occur. The analysis can be used to determine the level of success of both the department and the unit.

- (3) Assets Protected – Utilize a methodology for defining and protecting assets and determining their degree of risk from wildfire. The assets at risk addressed in the plan are life safety (citizen and firefighter), watersheds and water quality, timber, wildlife and wildlife habitat, rural communities, unique areas (scenic, cultural, and historic), recreation, range, property in the form of structures, and air quality.
- (4) Fire Management Prescriptions – Develop fire management prescriptions that focus on alternative means of protecting assets at risk. Prescriptions may include a combination of fuel modification, ignition, management, fire-wise planning and education, and pre-development planning. Specific activities include but are not limited to land use planning and associated regulations, educational programs and public information, department infrastructure including fire stations and water systems, fuels management and forest health. Pre-fire management prescriptions will also identify those who will benefit from such work and consequently those who should share in the project costs.
- (5) Fiscal Framework – Use the fiscal framework being developed by the SBF and CDF for assessing and monitoring annual and long-term changes in California's wildland fire protection systems. Incorporate pre-fire workload analyses (PWA) in an attempt to provide relevant data to guide in the development of the fiscal framework and public policy.

The Project area is primarily located within the service area of Battalion Six, although portions of the Project area are also located within Battalion One, Three and Five service areas of the Plan. The primary causes of fires in the Project vicinity are arson, debris burning, equipment use, and children playing with fire. Fire prevention programs and objectives in all Battalions include educating the community on fire prevention, conducting fire inspections throughout the battalions, establishing and working cooperatively with community fire safety council, improving vegetation management programs, and improving accuracy/cause determination in preliminary fire investigations.

5.3 LOCAL PLANS

There are three local entities in the Project area that have land planning and/or management responsibilities. The BCAG is the Metropolitan Planning Organization (MPO) and Regional Transportation Planning Agency (RTPA) for Butte County and is responsible for the preparation of all federal and state transportation plans and programs for securing transportation funds. BCAG is an association of local governments formed by Butte County and the cities of Biggs, Chico, Gridley, Oroville

and the Town of Paradise. In addition to BCAG, Butte County, and the City of Oroville also have comprehensive and/or management plans for lands in the Project area.

Although the majority of land in the Project area is managed by state agencies, there are considerable city and county lands that border the Project boundary. The following sections discuss the local plans that pertain to the Project area.

5.3.1 Regional Plans

5.3.1.1 BCAG, Butte County 2001 Regional Transportation Plan, 2001

The Butte County Regional Transportation Plan (RTP) was developed to fulfill the state requirements of California Senate Bill 45 and the passage of the Transportation Equity Act for the 21st Century (TEA 21) by Congress in June 1998. In accordance with state law, BCAG has prepared the regional transportation plans for Butte County every three years, the latest of which was adopted in 2001. The Butte County RTP is a 20-year, long range plan that is intended to attain an efficient and environmentally sound multi-modal transportation system. The RTP contains three required elements: (1) a policy element that reflects the mobility goals, policies and objectives of the region; (2) an action element that identifies programs and actions to implement the RTP; and (3) a financial element that summarizes the cost of implementing the projects in the RTP.

Within the policy element of the RTP, “Land Use Coordination” and “Pedestrian and Bikeways” policies are most applicable to the proposed Project. Land Use Coordination policies are intended to facilitate the development of the most efficient and effective transportation system possible through existing and future land development forms. Specific policies include assisting jurisdictions in the preparation of circulation analyses with the countywide transportation model, and encouraging agencies to require land uses that produce significant trip generation utilize roadways with adequate capacity and design standards for all transportation modes.

The objective of Pedestrian and Bikeways policies in the RTP is to “provide a safe, convenient, and efficient non-motorized transportation system which is part of a balanced overall transportation system.” Specifically, RTP policies state that local agencies should encourage: the development of trails to increase access to wilderness and recreational areas of the region, consideration of bicycles and pedestrians when improving existing roadways; and the incorporation of non-motorized facilities in planned street improvement projects where possible.

The RTP also includes an entire chapter on non-motorized transportation action items. This chapter identifies existing conditions and plans for bikeways on a jurisdictional and regional basis, and provides short and long range policy direction that is consistent and supportive of the goals, policies, and objectives contained in the more specific 1998 Countywide Bikeway Master Plan. The RTP makes reference to its support for the

general projects included in the Countywide Bikeway Master Plan, as well as support for the 41-mile bicycle trail loop around the Feather River, and trails located within the Oroville Dam State Recreation Area.

5.3.1.2 BCAG, Countywide Bikeway Master Plan, 1998

The Countywide Bikeway Master Plan for Butte County (the Bikeway Plan) was developed by the BCAG, with input from bikeway advocates, staff from each city and the county, the transportation management association, and the county public. The primary purpose of the plan is to designate a regional bikeway system for Butte County that focuses on area-wide bikeway connections.

The Bikeway Plan details the regional setting of Butte County as it applies to bicycle transportation, including details regarding regionally significant land use patterns, commute patterns, and existing bicycle-related facilities. The Bikeway Plan then details the goals, objectives, and policies, discusses the county's capital improvement program, and details the financial elements as related to bicycling in Butte County. The Bikeway Plan details the existing and planned bikeways and bicycle facilities throughout the county (as of September 1998). Existing facilities in the Oroville urban area include Class I bike paths along the Feather River from Table Mountain Boulevard to River Bend Park and on Table Mountain Boulevard across Feather River Bridge, and a Class II bike lane on Foothill Boulevard from Olive Highway to the city limit (near Pinedale Avenue). A Class I bike path along the south side of Feather River from the SR 162 Bridge over Feather River to Lake Oroville State Recreation Area is listed in the plan as scheduled for construction during 1998 and 1999. The plan also lists five Class I and 42 Class II proposed bicycle paths that are not yet scheduled for implementation. There are no regional bikeways in the Oroville area or in the Project area.

The Bikeway Plan contains specific goals, objectives, and policies. Most are general in nature and do not specifically relate to the Project area (although the Project area is within the area covered by the plan). One of the goals in the Bikeway Plan does mention the Project specifically and is included below:

Goal 6: Develop a bikeway system that encourages and facilitates recreational use.

Objective: Encourage recreational bicycling by providing a bikeway system that responds to the riding needs of both the avid cyclist and the "weekend" rider.

Policies: Emphasize connections to regional recreation centers, such as Lake Oroville and Bidwell Park; plan bikeway facilities to take full advantage of the scenic qualities of Butte County for the enjoyment of residents and visitors alike; provide adequate bicycle parking facilities at regional recreation areas where warranted by demand.

In addition to goals, objectives and policies, the Bikeway Plan identifies existing and planned Class I and II bikeways and planned bicycle related facilities in the Oroville

area. It also mentions that the City of Oroville Bicycle Transportation Plan was scheduled (at the time of writing this plan) to be adopted in October of 1998. Funding sources and design standards are also included in the plan.

5.3.2 County Plans

5.3.2.1 County of Butte, Butte County General Plan, 1996

Local governments have been directed by the State of California to prepare and adopt a general plan per Section 65302 (a) of the California Government Code. In compliance with California Law, the Butte County General Plan (the General Plan) was adopted in 1996 by the County of Butte and the Butte County Association of Governments. The purpose of this document is to provide a complete statement of the policies and intentions regarding future development of land over a planning horizon of 20 years, which extends to the year 2016.

The General Plan contains twelve elements, including Land Use, Circulation, Housing, Conservation, Open Space, Seismic Safety, Safety, Noise, Scenic Highways, Recreation, Economy, and Agriculture. California law does not exclude the area of incorporated cities from the coverage of county general plans. Therefore, the proposals in the Land Use Element, or the element most relevant to the Project, are county-wide in scope and are not limited to unincorporated areas. The most recent adoption of this element occurred in January 2000.

The land use element of the General Plan designates several land use categories within the Project study area. The three primary designations in the study area include Public, Grazing and Open Land, and Timber Mountain. Planned land uses, including their primary and secondary uses and intensity of use, are described below.

Orchard and Field Crops

Primary Uses: Cultivation, harvest, storage, processing, sale and distribution of all plant crops, especially annual food crops.

Secondary Uses: Animal husbandry and intense animal uses, resource extraction and processing, hunting and water-related recreation facilities, dwellings, airports, utilities, environmental preservation activities, public and quasi-public uses, home occupations.

Intensity of Use: Minimum parcel size of 5 acres. One single family (SF) dwelling unit (DU) per parcel with additional housing for on-site employees allowed.

Grazing and Open Land

Primary Uses: Livestock grazing, animal husbandry, intense animal uses and animal matter processing.

Secondary Uses: Resource extraction and processing, forestry, plant crops, agricultural support services, outdoor recreation facilities, airports, dwellings, utilities, environmental preservation activities, public and quasi-public uses and home occupations.

Intensity of Use: Minimum parcel size of 40 acres. Gross density could vary from 20 to 40 acres per dwelling unit provided at least 80 percent of the total acreage of a Project is set aside for open space uses. One single-family dwelling per parcel with additional housing for on-site employees is encouraged.

Timber Mountain

Primary Uses: Forest management and the harvesting and processing of forest products.

Secondary Uses: Animal husbandry, resource extraction and processing environmental preservation activities, outdoor recreation facilities, dwellings, utilities, public and quasi-public uses, home occupations, and airports.

Intensity of Use: In general, the minimum parcel size is 40 acres with some exceptions. One SF DU per parcel with additional housing for on-site employees.

Agricultural Residential

Primary Uses: Agricultural uses and SF dwellings at rural densities.

Secondary Uses: Animal husbandry, forestry, intense animal uses, home occupations, mining, outdoor recreation facilities, environmental preservation activities, airports, utilities, public and quasi-public uses, group quarters, care homes and transient lodging.

Intensity of Use: The minimum parcel size is 1 to 40 acres. One SF DU per parcel. Home occupations, farm animals, other uses and setbacks regulated to maintain rural character.

Foothill Residential

Primary Uses: Single family dwellings at rural densities.

Secondary Uses: Agriculture uses, animal husbandry, home occupations, resource extraction and processing, forestry, outdoor recreational facilities, environmental preservation activities, airports, utilities, public and quasi-public uses, dwellings, group quarters, care homes, and other secondary uses.

Intensity of Use: Minimum parcel size of 1 to 40 acres, with the specific density being subject to zoning factors and development criteria.

Low Density Residential

Primary Uses: Detached single-family dwellings at urban densities

Secondary Uses: Agricultural uses, animal husbandry, home occupations, outdoor recreation facilities, utilities, public and quasi-public uses, group quarters and care homes.

Intensity of Use: Zoning allows net parcel sizes of 1 acre to 6,500 square feet. One single-family dwelling per parcel with other residential uses limited to a maximum density of six dwelling units per gross acre. Home occupations, farm animals, other uses and setbacks regulated to maintain single-family residential character.

Medium Density Residential

Primary Uses: A mixture of urban residential uses, including, detached single-family homes, condominiums, multiple-dwelling structures, mobile home parks, group quarters and care homes.

Secondary Uses: Home occupations, professional and business offices, outdoor recreation facilities, utilities, public and quasi-public uses.

Intensity of Use: Zoning allows net parcel size of 6,500 square feet. A maximum density of 13 DUs per gross acre with group quarters and care homes limited to similar densities is permitted.

High Density Residential

Primary Uses: Higher-density urban residential uses, including condominiums, multiple-dwelling structures, mobile home parks, group quarters and care homes.

Secondary Uses: Home occupations, professional and business offices, outdoor recreation facilities, utilities, public and quasi-public uses.

Intensity of Use: Zoning allows parcel sizes of 6,500 square feet. A maximum density of 20 DUs per gross acres with group quarters and care homes limited to similar densities is permitted.

Commercial

Primary Uses: Structures and activities providing a full range of merchandise and services to the general public.

Secondary Uses: Wholesale storage and distribution, processing and manufacturing, transient lodging, dwelling and group quarters, home occupations, utilities, public and quasi-public uses.

Intensity of Use: Minimum parcel sizes, dimensions and setbacks to facilitate commercial development. Residential and industrial uses are limited to minimize conflicts with commercial uses.

Industrial

Primary Uses: Processing, manufacturing, packaging, storage and distribution of goods and commodities.

Secondary Uses: Light commercial uses, dwellings, utilities, public and quasi-public uses.

Intensity of Use: Minimum parcel sizes, dimensions and setbacks to facilitate intense industrial development. Residential and light commercial uses limited to minimize conflicts with industrial uses.

Public

Primary Uses: Large facilities owned and operated by government agencies, including schools, colleges, airports, dams and reservoirs, disposal sites, recreation facilities, conservation areas, fire stations and other government buildings and property.

Secondary Uses: Hospitals and other large quasi-public uses, housing for students or on-site employees, utilities.

Intensity of Use: No standards on intensity, except where necessary to protect adjacent uses and the public welfare.

Another chapter of the General Plan relevant to the Project includes the Scenic Highways Element, which fulfills Section 65302(h) of the Government Code to develop, establish, and protect scenic highways. Scenic Highways are defined as a main public road through an area of picturesque natural landscapes. A Scenic Highway includes not only the pavement or traveled roadway but also the entire publicly owned right-of-way. Customary accessory uses usually found in the right-of-way include bridges, drainage facilities, public utilities, walkways and trails, protective planting and landscaping, rest areas, and vista points.

The primary objective of this element is the projection and enhancement of scenic areas adjacent to and visible from selected highways. Within Butte County, Highway 70 north of Highway 149 is eligible as a State Scenic Highway, although not officially designated. Being “eligible” indicates that the route is shown on the Master Plan of State Scenic Highways. It is not protected by a State-approved, county-developed plan. A segment of this section of Highway 70 lies within the FERC Project boundary.

The General Plan contains a number of policies that could pertain to the operation and management of Lake Oroville. The County’s policies are primarily related to enhancement of recreational and biological resources at Lake Oroville, as well as the reduction of potential flood and seismic hazards. Butte County has indicated its strong interest in promoting more recreational development around the reservoir, and there appears to be support for land use and zoning designations around the reservoir that would make this development possible. The County policies relevant to Lake Oroville are described below in Table 5-5, organized by element of the General Plan.

Table 5-5. Butte County General Plan Policies Related to Lake Oroville.

Element	Policy Statement
Land Use	<p>Biological Habitat: Lake Oroville and Butte County's larger streams are highly valuable habitats for trout, salmon, bass, and other game fish. Several rare and/or endangered plants and animal species are found within the county.</p> <p>Policy 6.5.a. Regulate development in identified winter deer ranges to facilitate the survival of deer herds.</p> <p>Policy 6.5.b. Prevent development and site clearance other than river bank protection of marshes and significant riparian habitats.</p> <p>Policy 6.5.c. Limit development which would increase sediment loads in prime fishing waters.</p> <p>Policy 6.5.d. Regulate development to facilitate survival of identified rare or endangered plants and animals.</p> <p>Geologic Hazards: The risk of landslides is greatest in areas with steep slopes, weak rock, and high rainfall; some areas around Lake Oroville and its branches have very high risk. Erosion potential varies by the same factors but is greatest in granite areas. Findings and policies on these subjects and other geologic hazards are presented in the Safety Element adopted in 1977.</p> <p>Policy 7.4.a. Correlate allowable density of development to potential for landslides, erosion and other types of land instability.</p>
Open Space	<p>Open Space for Outdoor Recreation: The DPR manages the extensive recreation facilities around Lake Oroville and the Thermalito Bays.</p> <p>Policy L: The Butte County should encourage the DPR to complete their development of recreational facilities in the Lake Oroville State Recreation Area.</p>
Scenic Highways	<p>Eligible State Scenic Highways: Highway 70 north of Highway 149 is eligible as a State Scenic Highway, although not officially designated.</p> <p>Policy 1 Protect valuable scenic areas for enjoyment by residents and visitors;</p> <p>Policy 5 Locate and design utility structures to minimize visual impact, where economically feasible;</p> <p>Policy 6 Encourage compatible land use patterns in scenic corridors; and</p> <p>Policy 8 Consider economic impacts on property affected by a scenic highway designation.</p>
Recreation	<p>Policy 5: Lake Oroville and Facilities: Proposed development (parking, camp, picnic, boat ramp, comfort station, trailer, food, gasoline, oil, water, observation points and other facilities to serve the recreation minded public) at the following facilities: Lime Saddle, Foreman Creek, Bloomer, Craig, Kelly Ridge, Forebay, Loafer Creek, Goat Ranch, Afterbay, Potter Ravine, Fish Hatchery, etc. Development Agencies: County, Recreation District and State Department Parks and Recreation.</p>

5.3.3 Municipal Plans

5.3.3.1 City of Oroville, City of Oroville General Plan, 1995

The City of Oroville General Plan (General Plan) is a statement of Oroville's vision of its long-term future, focusing on the physical components that comprise the City. The General Plan consists of eight sections: 1) land use; 2) design; 3) circulation; 4) open space, natural resources, and conservation; 5) public facilities and services; 6) safety; 7) noise; and 8) housing goals, objectives, policies, and designations. The objectives and goals outlined in the General Plan are intended to be the framework within which the City will make future decisions related to the community.

The 84 square mile planning area covered by the General Plan is comprised of seven planning sectors that include the Oroville Sphere of Influence (as defined by the Butte County Local Agency Formation Commission), and areas immediately to the west, south, and east. The General Plan directly addresses the issues of housing, conservation, recreation, industry, and circulation, as well as a number of others. Among the themes of the General Plan that are relevant to the Project area are:

Growth: The Plan encourages new industries and a higher population growth rate in order to improve the City's economy.

Environmental Awareness and Conservation: The General Plan calls for a relatively high level of ongoing management and planning for the City's natural and cultural resources, and encourages the conservation of oak woodlands, wetlands, and riparian corridors, in particular, in order to enhance the quality of life in the area relative to nearby metropolitan areas.

The Land Use Element of the General Plan designates areas near the Project facilities as "Medium Density Residential" and "Parks." These land use designations are described below.

Medium Density Residential. Medium density residential land uses in the Oroville Planning Area consist of single-family residential development with approximately two to six units per gross acre on land under 30 percent slope. This land use is primarily located in the Kelley Ridge Planning Sector within Oroville's Sphere of Influence, which is outside of the city's jurisdiction.

Parks. This land use category includes public parks, golf courses, or other appropriate uses. A recreational vehicle park or campground may be permitted as a conditional use within areas designated as Park. Within the city, this land use includes the Table Mountain Golf Course, located adjacent to the Oroville Wildlife Area in the Thermalito Planning Area. Within Oroville's unincorporated planning area, park lands are primarily located near the Oroville Dam, and

contain such recreational areas as the Bidwell Canyon Campground, the Lake Oroville Visitor Center, and the Dan Beebe trail, which are managed by the DPR.

General Plan policies that relate to the operation and management of Lake Oroville generally include enhancement of recreational and biological resources at Lake Oroville, as well as reducing potential flood and seismic hazards. Policies that specifically mention the Project are listed below in Table 5-6, organized by element of the General Plan.

Table 5-6. City of Oroville General Plan Policies that Mention the Project.

Element	Policy Statement
City Design	<p>Policy 4x: Request the state to landscape and develop the Thermalito Afterbay as a destination water recreation park which defines the western boundary of the community in accordance with the State's original master plan of recreation development associated with the FERC permit.</p> <p>Policy 4y: Encourage the efforts of the Feather River Parks and Recreation Department in the North Forebay, Nelson Ballpark expansion, and development of River Bend Park.</p>
Open Space, Natural Resources and Conservation	<p>Policy 6.11s: Coordinate with the DFG to ensure the ongoing operation of the Feather River Fish Hatchery.</p> <p>Policy 6.11w: Work with the DFG to ensure the preservation and enhancement of species or resident and anadromous fish along the Feather River, in Lake Oroville, and throughout the Planning Area.</p>
Safety	<p>Policy 8.10e: Monitor studies related to induced seismicity; if further studies establish a conclusive relationship between reservoir drawdown, refilling, and seismic activity, encourage the DWR to manage the Oroville Dam water regime to reduce risk (evidence thus far suggests a relationship between reservoir drawdown, refill, and subsequent seismic activity. This was seen in the 1975 Cleveland Hills earthquake, thought to have occurred after unprecedented drawdown and refilling of Lake Oroville).</p> <p>Policy 8.20m: Identify critical facilities in flood hazard areas and within the Oroville Dam inundation area, and seek ways to improve their level of protection, if possible (Critical facilities provide fire and emergency services, water, electricity, gas supply, sewage disposal, communications, and transportation).</p> <p>Policy 8.20o: In the event of dam failure on the Oroville Dam, implement emergency measures consistent with the city's Multi-hazard Functional Disaster Plan (Dam failure, while considered unlikely, is among the hazards mentioned in the City's Multi-hazard Functional Disaster Plan).</p>

Source: City of Oroville (1995).

The *Bicycle Transportation Plan* lists four goals, which include:

- (1) Provide a system of Class I and Class II bikeways and multi-use recreational trails throughout the Oroville Urban Area that will increase bicycle access to major facilities, shopping, schools, work centers, and points of interest, and will

increase the utility of bicycles not only for recreation, but also as a viable mode of alternative transportation.

- (2) Improve safety conditions, efficiency, and comfort for bicyclists and pedestrians through traffic engineering and law enforcement efforts.
- (3) Provide adequate bicycle support facilities.
- (4) Develop a bikeway system that encourages and facilitates recreational use.

Parts of the Project area (the Diversion Pool, Power Canal, Thermalito Forebay, Thermalito Afterbay, Spillway, and OWA) that have bicycle paths traveling by them are of the same network as Oroville's bikeway system. The plan suggests a need for bicycle support facilities, some of which could be associated with bikeways in and near the Project.

5.3.3.2 City of Oroville, *Bicycle Transportation Plan*, 1998

The City of Oroville Bicycle Transportation Plan, adopted in December 1998, provides the most up to date policies for bicycle transportation in the City of Oroville. The City of Oroville plans all bikeways within its "Sphere of Influence," although they are ultimately outside of the city's jurisdiction. The planning and implementation of bikeways is not a mandated process, but one undertaken by communities at their discretion. The City of Oroville Bicycle Transportation Plan is broken down into 8 chapters. Chapter 7 (Goals, Objectives, and Policies) is the portion of the City of Oroville Bicycle Transportation Plan that relates most closely to the issues associated with Project facilities. The City of Oroville General Plan has specific goals and policies related to bicycle and pedestrian paths, which are incorporated to form the core of the policy element of this bicycle transportation plan.

6.0 ANALYSES

6.1 RESULTS

As a result of this study, it will be possible to determine if potential changes to project features and operations as a result of relicensing activities would be consistent or inconsistent with the comprehensive land and resource management plans that were reviewed in this report. Equally important will be the ability to evaluate whether PM&Es developed by work groups for the Project will be consistent or inconsistent with the comprehensive plans, and what aspects of proposed actions would need to be altered to attain consistency.

At the time this Draft Final Report was released (April of 2003), no changes to Project operations or facilities or PM&Es have been proposed. When changes and PM&Es are proposed, their consistency or inconsistency will be evaluated in the Final Report.
